

These flat body black CAT6 cables feature a 1.8mm thick profile for space saving applications including floor or baseboard installations. These unique cables also support 10/100/1000Mbps ethernet speeds. They are made with stranded 32AWG (American Wire Gauge) conductors for even greater flexibility.

These cables are a black UTP (Unshielded Twisted Pair) patch cable which include molded boots. All wiring meets the conformance to the T568B standard. Copper conductors ensure the best signal possible. RJ45 plugs are featured with gold connectors to prevent corrosion to ensure a longer cable life. Our flat CAT6 Ethernet patch cables are tested to the highest quality which exceed the EIA/TIA-568-C standard.
